DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

The present invention is directed to an optical disk storing a data structure for managing reproduction of at least video data having multiple reproduction paths by a reproduction device. Each independent claim identifies the uniquely distinct features "the clip information file including an entry point map associated with corresponding one reproduction path of the multiple reproduction paths", "each entry point map associated with a corresponding stream file and identifying the entry points in the video data for the associated reproduction path", and "the entry point map including path change information for identifying entry points at which enter to an associated reproduction path from another reproduction path is permitted and exit from the associated reproduction path to another reproduction path is permitted" The closest prior arts, EP 0961279, EP 0689206, and search report dated February 4, 2010 from the European Patent Office for counterpart European Application 037618451 disclose the conventional optical disk for storing a data structure managing reproduction of video data, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
